

ISO-Spike sealing tape

Elastomer bitumen tape

Structure:

The ISO-spike sealing tape is a very self-adhesive poetry tape that with an unilaterally silicone-laminated film is concealed. The material composition is based on plastic-modified bitumen with very good elastic qualities.

Usage:

ISO-spike sealing tape will be used to seal up spike holes in roofing films afterwards.

Processing:

The ISO-spike sealing tape has to put on the moved sub-membrane road in the area of the rafters. Then it is brought the counter battens on and is nailed. The spike hits in the foil are sealed by the elastic behaviour of the ISO-spike sealing tape afterwards.

Technical information:

Weight:	ca. 1,5 kg/m ²
Thickness:	ca. 1,5 mm
Colour:	black

Form of delivery:

Roll length:	10 m or 20 m
Width:	50 mm
Rolls/packageing:	6

Storage advice:

Protected before direct solar irradiation,
drily on the cut edges standing interpositions necessarily
