

Intermediate Plastic Layer RZ 70

Construction: The Intermediate Plastic Layer RZ 70 consists of a rot proof synthetic textile fibre carrier with a modified bitumen coating on both sides and a siliconised PE film lining on one side.

Area of Application: The Intermediate Plastic Layer RZ 70 is used as an anti-corrosion device for chassis of carriages as well as other duties. Primarily it is used between the carriage chassis and the floor. Apart from corrosion proofing it also has a sound reduction effect.

Method of Application: Surfaces must be dry, free from grease and any loose particles. The Intermediate Plastic Layer RZ70 is applied to the carriage chassis using slight pressure. The layer is normally applied cold but it is possible, through the application of heat, to increase its adhesive properties.

Units of Supply:

Length of roll:	10 m
Width:	20 mm to 770 mm
Thickness:	1.5 mm

Storage Advice: Store away from direct sunlight, stand on edge.
